Product features

- Downward-opened panel designed, Convenient for fuse replacement.
- Top and bottom designation with good looking covers, convenient to open and pug-in for wiring.
- European style terminals is used control wire is connected to the Re-wiring shall not be needed in case of replacement.
- Contains high-speed fuse to prevent damage to major components, external wiring, and reduces installation space when anomaly occurs.
- In cases of SCR overheating or fuse burn-down, the system output is stopped immediately. Once the malfunction is eliminated and power is restored, the system will buffer the output to prevent the fuse burn-down.
- Immediately stops the output after a 0.5Hz power failure, and then buffer the output. (This prevents power surge from causing FUSE to blow abnormally.)
- Activating circuit is independent from the main PCB circuit to prevent the damage occurred in case of main circuit malfunction.
- Main power is one spec. Design for 180~480VAC
- Automatic self-detecting function enables the availability for 45~65Hz frequency, Manual selecting or switching shall not be needed.
- The auxiliary powers (AC1, AC2) are independently controlled for all models.
- Multi-LED display panel makes the operating condition clear.
- Independent adjustment of Max and BIAS.
- Build-in buffering output adjustment (SFS VR), adjusting range 0~25 seconds. (Only for the phase control product.)
- Using Single Chip Control, input resolution 10-Bit, output resolution 0.1%.
- 4~20mA, 1~5VDC, 2~10VDC, 0~20mA, 0~5 VDC, 0~10VDC, dry contact points...etc., available for any kind of control signal.
- Automatic detection and display for power out-of-phase, SCR overheating, and fuse burn-down with one set of alarm dry contact output.
- Control modes: Phase proportional control, Zero phase even distribution and Zero phase sampling ...etc, can be switch be switched each other.

Outline descriptions

Installation Precautions and Surrounding Conditions

- Power Regulator generates internal heat during operation. Install the unit vertically with sufficient space reserved on both sides, otherwise heat dissipation may be hindered and the internal temperature of the Power Regulator may rise continuously.
- There must be some ventilation holes on the control box. Please follow the principle of hard air rising to install the ventilation holes or extra cooling fans.
- The Control Box shall be provided with vents or a ventilation fan for an air convection base on the principle that hot air rises from bottom to top.
- DO not install the device in a hot position or where the ventilation is poor, otherwise use it at 70% of the rated capacity.
- Avoid installing the regulator in the places with heavy water evaporation, acid, alkaline, or corrosive air.
- Humidity in the surrounding: RH<90% . (Without condensation)
- Temperature in the surrounding: -10°C ~45°C .

Rated Capacity %

※The above data are for conditions where the heat dissipation fin is installed to maintain heat convection without corrosion or oil stains on the fin.

Control and applied loading

輸出量 Output 控制方式 Control mode	輸出波形 Output wave		
	20% Output	50% Output	90% Output
相位控制 Phase angle control			
零位控制(均分控制) Zero crossing control (Cycle sampling)	 1 cycle ON and 4 cycle OFF	 1 cycle ON and 1 cycle OFF	 9 cycle ON and 1 cycle OFF
零位控制(取樣控制) Zero crossing control (Time sampling)	 T	 T	 T

- **Phase Angle Control:** Continuous Phase Angle Control, steady output, no fluctuation in the current meter, but harmonic waves occur.
Applicable Loading: Load with constant impedance, load with variable impedance, reactant load, IR Lamp.
- **Zero Cycle Sampling:** Distributive Zero Control (Variable cycle), minimum resolution 1Hz - number of harmonic waves is lower than Phase Angle Control - current meter fluctuates during output.
Applicable Loading: Load with constant impedance.
- **Zero Time Sampling:** Time Sampling Zero Control, (Constant period) minimum resolution 1Hz - control in low harmonic wave - output is in a full continuous wave.
Applicable Loading: Load with constant impedance.
Remarks: Zero cycle sampling low harmonic control, THID harmonic wave lower than 5%, which meets the US power company IEEE-519 specifications.
(Taiwan Power Company follows the regulations of the American Electric Power Company.)

Wiring and Planning Precautions

- Planning of the standard mains circuit: Main power → NFB → MC → Power Regulator → Load.
- Make sure all the screws are tightened for the wiring, otherwise poor contact may result in a temperature rise.
- On completion of wiring, make sure all the cover plates are installed before engaging the power source, otherwise electrocution may occur, or a short-circuit may occur due to a conductive object falling in.

Table of Product ID

Product Series	W6	W6 Series														
Specification Type	S	Single-phase angle control														
	Z	Two-wire three-phase zero crossing control														
	T	Three-wire three-phase angle control														
Mains Voltage	1V	40~120VAC	45~65Hz								Three-wire three-phase angle control	Two-wire three-phase zero crossing control	Single-phase angle control			
	4V	180~480VAC														
	6V	460~690VAC														
Rated Current	030	30A														
	045	45A														
	060	60A														
	080	80A														
	100	100A														
	125	125A														
	150	150A														
	180	180A														
	230	230A														
	270	270A														
	300	300A														
	380	380A														
450	450A															
580	580A															
750	750A									T	Z	S				
Control mode (CT.MD)	P	Phase Control Proportional Output						All the functions can be switched to each other. (Refer to table 1-1)		●		●				
	A	Zero Average Distribution (Variable cycle)								●		●				
	S	Zero Sampling Control (Sampling time 2 seconds)								●	●	●				
	N	Four-wire three-phase angle control (Load connected to Y, neutral point connected to N-phase) ※Selection of control mode, see table 1-1.								●						
	V	Phase constant voltage								●		●				
	C	Phase constant current				Control mode can be selected. (Refer to table 1-1)				●		●				
	L	Phase current limit								●		●				
Serial Number		—														
Auxiliary Power		1	1 φ 110VAC													
		2	1 φ 220VAC													
Input signal code		0	0~5VDC				Input signal can be selected. (Refer to page 5)									
		1	1~5VDC													
		2	2~10VDC													
		3	0~10VDC													
		4	4~20mA													
		5	0~20mA													
		*	SSR dedicated (4~24VDC)													
Buffering time code		J	Adjustable buffering time, 0~25 seconds (The default setting is about 12 seconds)													

Table 1-1

Control mode CT.MD	SW1
P Phase angle control	DP1 1 2 NO DP2 1 2 NO
A Zero cycle sampling	DP1 1 2 NO DP2 1 2 NO
S Zero time sampling	DP1 1 2 NO DP2 1 2 NO

※ Three-phase two-wire products without SW1.

Table 1-2

Control mode CT.MD	SW1
C Constant current	DP1 1 2 NO DP2 1 2 NO
L Current limit	DP1 1 2 NO DP2 1 2 NO

Selection of the input signal

- ◎ 4~20mA、0~20mA、MANUAL Selection S1 (Input Impedance 249Ω)
- ◎ 1~5VDC、0~5VDC Selection S2 (Input Impedance 200KΩ)
- ◎ 2~10VDC、0~10VDC Selection S3 (Input Impedance 18KΩ)

Functional adjustment

- VR1 BIAS** : Standard output voltage adjustment.
(Counter-clockwise adjust the control signal, lower the input will produce the output.)
- VR2 SFS** : Buffer rising time adjustment.
(Adjusting range 0~25 seconds, clockwise adjustment will increase the time. No applicable for zero crossing type product.)
- VR3 MAX** : Maximum output voltage adjustment.
(Adjusting range 10~100%, counter-clockwise adjustment will decrease the output. Set to zero will have no output.)

- VR4 OLSET** : Adjustment of over current.
(Adjusting range 60~130%, counter-clockwise adjustment will decrease the output.)

- PB1 RE SET** : Over current RESET.

Descriptions for LED lights and trouble shooting

L1 Power Power light	☀ On: Auxiliary power on. ● Off: 1.Auxiliary power sources have no output → Make sure AC1, AC2 auxiliary power sources have power output. 2.Control board malfunction → Please replace the same spec. control board or send the power regulator for maintenances.
L2 Input Input light	☀ On: Control input signal is in. ● Off: 1.Control signal is not in → Please check the temperature gauge to see if there is input, check the connection and the wiring. 2.Wrong connection on the electrodes of the control board → Check the electrodes of the temperature gauge. 3.Set to zero on the Max VR of the control board or outside VR → Check two VRs to see if any one of them is set to zero. 4.Control board malfunction → Please replace the same-spec. control board or send the power regulator for maintenances.
L3 Output Output light	☀ On: Power regulator is in output └ Phase angle control. (Light and dark based on the output.) └ Zero crossing control. (Flash based on the output.) ● Off: 1.If the abnormal light L5 is on. (Fuse burn down or main power has no output.) → Please refer to ERR (L5). 2.If the temperature light L4 is on. (Power regulator is overheating.) → Please refer to TH (L4). 3.If the input light L2 is off. (No input signal.) → Please refer to IN (L2). 4.If the input light L2 is on. (Control board malfunction.) → Please replace the same spec. control board or send the power regulator for maintenances.
L4 TH Err Over heating light	☀ On: 1.Power regulator is over heating → Cooling fan is not operating, check the power, fan damage, or if the fan is stuck by any object and get rid off it if necessary. 2.Bad ventilation or the ambient temperature is too high → Please change the installation place or improve the ventilation. ● Off: Normal, power regulator is not overheating.
L5 FUSE/ Source Err Power source abnormal light	☀ On: 1.Main power source have no output or out-of-phase → Check the power output and all the abnormal conditions. 2.High-speed fuse burn down → Please replace the same spec. fuse and check the shortage and the ground of the loading before restoring the power. ● Off: Normal
L4&L5 O.L Over current light	☀ L4 and L5 On: Power regulator is over current → Please check the shortage and the ground of the loading before press PB1 to reset. (Limited current type/Constant current type of product) ● Off: Normal

Descriptions of the connectors

Single phase, Two-wire three-phase (W6S · W6Z)

Connector pin	Connector No.	Description	Remarks
TB-01	FS	Detection of the fuse burn down	The connection from power to loading must be connected back to the FS side.
TB-02	M	+5VDC	Only for this control board, not for other use positive control signal input.
TB-03	+	Positive control signal input	The default setting is 4~20mA when the sticker is not marked.
TB-04	—	Standard analog signal voltage	
TB-05	E3	Connected to the VR 3rd pin of the outside potentiometer	Adjustable output 0~100%, Please eliminate the shorted copper wire between E3 and E2 when using the outside potentiometer with VR. (2~10KΩ)
TB-06	E2	Connected to the VR 2nd pin of the outside potentiometer	
TB-07	E1	Connected to the VR 1st pin of the outside potentiometer	
TB-08	NC	Alarm connector output (Normal close)	Connector capacity 250VAC 2A 24VDC 2A
TB-09	COM	Alarm connector output (Common point)	
TB-10	NO	Alarm connector output (Normal open)	
TB-11	AC1	Auxiliary power source	Please refer to the stick for the auxiliary power and voltage.
TB-12	AC2		

Three-wire three-phase (W6T)

Connector pin	Connector No.	Description	Remarks
TB-01	•	Empty pin	Do not connect.
TB-02	M	+5VDC	Only for this control board, not for other use positive control signal input.
TB-03	+	Positive control signal input	The default setting is 4~20mA when the sticker is not marked.
TB-04	—	Standard analog signal voltage	
TB-05	E3	Connected to the VR 3rd pin of the outside potentiometer	Adjustable output 0~100%, Please eliminate the shorted copper wire between E3 and E2 when using the outside potentiometer with VR. (2~10KΩ)
TB-06	E2	Connected to the VR 2nd pin of the outside potentiometer	
TB-07	E1	Connected to the VR 1st pin of the outside potentiometer	
TB-08	NC	Alarm connector output (Normal close)	Connector capacity 250VAC 2A 24VDC 2A
TB-09	COM	Alarm connector output (Common point)	
TB-10	NO	Alarm connector output (Normal open)	
TB-11	AC1	Auxiliary power source	Please refer to the stick for the auxiliary power and voltage.
TB-12	AC2		

Applicable high-speed fuse for the power regulator

Wiring setup examples for single-phase and Two-wire three-phase zero crossing

Wiring setup examples for and Three-wire three-phase angle and Four-wire three-phase angle

■ Main circuit wiring diagram

※ When electromagnetic switch is used, please install it on the power source side.

1. Control signal input

2. Manual control

3. Control signal input, limited adjustment for output

4. Dry contact signal input, outside VR adjustment

5. Manual-automatic relay switch, outside VR adjustment

6. Manual-automatic relay switch

7. Control signal input, basic output setting

8. Multiple connection, only one for outside VR setting

9. Basic and maximum output setting

10. Three set connection, independent outside VR setting (Limited for 3 sets cascades only)
